Marking:				UHL CE on the back, upper right side			

User manual

New Bochum Goggles

with hinge or with aluminium rail

Description

New Bochum goggles with lens attached to hard hat.

- The New Bochum goggles are made in two dimensions: 300x180mm or 200x135mm.
- In these dimensions the Bochum goggles are made of zinc-coated wire cloth or aluminium sheet.
- To enhance the stiffness the wire cloth is edged with an aluminium frame.
- The inside of the goggles is blackened so that the wearer is not blinded by glare from the inside.
- The window is made of sturdy aluminium sheet, which is pressed with the wire cloth.
- In the window fit inspection glasses and PC-visor with the dimensions 60x120mm or 50mm diameter.
- The lenses are securely clamped in the frame by two steel springs.

- Two types of attachment are available for Bochum goggles. By default the goggles can be screwed to the hard hat with a folding hinge. Alternatively, they can be attached to an universal visor carrier with an aluminium rail.

Manual

- Before using the Bochum goggles you have to make sure that a lens is inserted.
- For changing the lenses, you have to raise the steel springs and turn them aside. Now the lens can be inserted and the steel springs can be returned to their original position.
- The Bochum goggles are attached to the hard hat by means of a folding hinge. For this, the brim of the hard hat must be drilled and the enclosed M5 screw is attached to the hard hat with the flange nut. The folding hinge can now be shoved on the hard hat and fixed with a wing nut.

- The Bochum goggles are attached to the hard hat by means of a folding hinge. For this, the aluminium rail is attached to a visor carrier with its oval holes.

Storage

Personal protective equipment should be stored in dry rooms. Especially components made of plastics should not be exposed to intense solar radiation.

Cleaning

The Bochum goggles should only be cleaned with thinner or compressed air.

To avoid any scratches on the lenses, no hard or grained objects should be used for the cleaning. As far as possible the lenses should be cleaned with compressed air.

Disinfection

The Bochum goggles can be treated with mild, standard disinfectants.

Safety checks

Before using the Bochum goggles the user should do a safety check. Damaged face shields or other damaged parts have to be replaced.

Maintenance/repairs

Maintenance has to be conducted on a regular basis.

To be checked in particular:

- Attachment and fit of the lenses.
- Mobility of the folding hinge.
- Rivetted connection of the aluminium rail with the Bochum goggles.
- Welded seam between Aluminium window frame and the wire cloth.

Repairs can only be done with the original parts of the manufacturer

Decay time/aging

New Bochum goggles are exposed to strong IR-radiation. Therefore no general decay time can be stated. It depends on the duration of use and the overall condition. After 3 years the latest the personal protective equipment should be replaced

Used materials (depending on model)

- Zinc-coated wire cloth
- Aluminium sheet 0,8mm
- Aluminium sheet 0,5mm
- Heat-resistant hard-coating

Marking of the New Bochum goggles: UHL CE

The article is tested according to EN 166:2001 (in conjunction with Regulation (EU)2016/425).

Explanation of the marking:

UHL = Manufacturer
Rudolf Uhlen
CE = CE sign

Notified Body:

DIN CERTCO Gesellschaft für Konformitätsbewertung mbH
Alboinstr. 56
12103 Berlin
Notified Body: No. 0196

General remarks

The New Bochum goggles must be securely attached to the hard hat. This happens either directly (screw connection) or with the right hard hat carrier (all Rudolf Uhlen GmbH carriers)

When approaching the danger zone, the New Bochum goggles have to be flipped down.

The user is responsible to use the correct filter lenses. The following aspects have to be considered:

- Type of optical radiation (IR- or UV-radiation).
- Intensity of the radiation (protective shade according to EN 170 and EN 171).
- Mechanical risks due to flying particles.

It has to be considered that the Bochum goggles do not cover the whole face therefore provide only limited protection against mechanical risks. In addition no PC-visor with 1mm thickness can be used in the window frame. The visors have to be at least 2mm thick or must be made of laminated glass.

The user has to take in consideration that the optical radiation only hits the eye through the filter glass. The wire cloth does not provide sufficient protection against the radiation. The same applies for radiation coming from the side of the Bochum goggles.

The window frame has only a limited field of vision that does not comply to the normed field of vision of the EN 166. Therefore the Bochum goggles can only be used for focused works for a short time.

Warning!

The safety officer has to be contacted to make sure that the user is working safely.

Eye-protection devices against particles with high velocity could transmit the impact energy, if the device is worn together with standard glasses.

If the eye-protection device is composed of two different de-

vices, only the protection of the device with the lower protection class is given.

If the articles are used in high temperature areas, you have to use articles with the test marking "BT". The letter T indicates a test environment of extreme temperatures (EN 166).

The CE-testing does not include the lenses made of minerals.

The Bochum goggles should only be used for a short period of time and then only dedicated to a certain purpose – that is working with hot metal. The protective effect exists only if the look is focused on the molten mass. There is no protection against collateral radiation.
